INTRODUCTION

Second-year Computer Engineering student at SVIT focused on practical software development, AI/ML and modern full-stack applications. Builds project-based solutions using React, Node.js, PostgreSQL and Python, with hands-on experience in college teams, event coordination and student initiatives.

TECHNICAL SKILLS

Languages	:	Basic C, HTML, CSS, JavaScript, Python
Frameworks & Web	:	React.js, Express.js, Node.js and basic modern web development
Databases	:	PostgreSQL
Tools & Automation	:	Git, GitHub, VS Code

EXPERIENCE

Production Head - SVIT Podcast Club (SPC) 2026
- Leading production planning, recording coordination and content execution for campus podcast activities.
- Coordinating with the production team to maintain smooth technical and content workflows.

Admin & Logistics Core Team Member - TEDxSVIT 2026
- Supported event planning, administration, communication and on-ground coordination.
- Assisted the team in managing operational tasks for event execution.

Logistics Core Team Member - IP Cell 2026
- Handled event logistics, resource coordination and on-ground support for college activities.
- Worked with the team to support smooth event operations and setup.

Event Management Core Team Member - PRAXIS Club 2026
- Supported event planning, participant coordination and on-ground management for club activities.

SVIT Unstop Campus Champion - Unstop 2026
- Represented SVIT in the campus program and encouraged student participation in competitions and opportunities.

EDUCATION

Sardar Vallabhbhai Patel Institute of Technology (SVIT), Vasad 2025 – Present
Bachelor of Engineering in Computer Engineering — Second Year

PROJECTS

PackSmart AI Source Code
Python, FastAPI, React, Scikit-learn, Supabase
- AI/ML-based packaging optimization application evaluating material suitability, shelf life, sustainability and cost.
- Combines machine learning with standards-based barrier and material analysis.

Smart Warehouse Automation System Source Code
Next.js, TypeScript, PostgreSQL, Supabase
- Smart warehouse platform with A* pathfinding and autonomous mobile robot simulation.
- Includes QR checkpoint verification, fleet metrics and audit-trail oriented operations.

AI News Summarizer Source Code
Python, Flask, spaCy, NLTK, Scikit-learn
- NLP application for article summarization, sentiment analysis and named entity recognition.
- Also supports keyword extraction and credibility/bias analysis.

Hillora Source Code
React, Vite, Tailwind CSS, Framer Motion
- Travel and hill-destination web platform for exploring scenic locations and useful destination information.
- Designed with a clean, interactive user experience for travel discovery.

The BeingStrong Fitness Source Code
Next.js, React, Tailwind CSS, Framer Motion, Vercel
- Modern fitness/gym website presenting gym information, services and trainers.
- Built with responsive components, animation and a user-focused web experience.

CERTIFICATIONS

- NLP Ignite Bootcamp — 3rd Rank, SVIT ACM Student Chapter (2026)
